

DB Energie **Energy Services:** Services for energy- intensive companies

Product information

We've got the future covered. DB Netze.

Holistic expertise from a single source

The experts at DB Energie support their customers in tapping into new potential through holistic energy-related competence from a single source, offering cross-branch, professional procurement and consulting services for industrial companies, re-distributors and franchise chains.

Our range of services:

- Energy consulting
- Structured power procurement
- Structured gas procurement

Energy consulting:

Technical and economic consulting for optimised energy management

When optimising energy costs, great potential for savings can be generated by analysing grid access and consumption structure or by devising cost-optimised solutions while making full use of available tax advantages.

DB Energie provides its customers with on-going support along their entire value-(adding) chain.

Our offers extend from technical and economic energy consulting through to structured power and gas procurement on the wholesale market, together with CO₂ certificate trading.

We align the total energy management for our customers strategically according to demand and offer a range of different possibilities, from optimisation of the regular procurement and provision process through to on-going portfolio and risk management. We help you to devise your services portfolio in accordance with your demand.

Structured power procurement: Minimising risks through long-term price hedging and short-term quantity flexibility

Dramatic fluctuations in energy prices make it difficult to plan power procurement activities, which in turn become increasingly complex. This turns the focus to minimising risks through long-term price hedging, as well as volume flexibility. For this purpose structured power procurement through an independent service provider offers the best chances.

Our role as Germany's largest power consumer together with our independence gives us a comprehensive overview of the whole market. This gives us the chance to purchase energy where it is offered at the lowest rates.

By breaking power procurement down into several points in time, your power portfolio becomes more transparent with competitive prices and the necessary flexibility needed to react promptly to the development of your company.

Structured gas procurement: Greater transparency, efficient cost reduction and access to liquid commercial markets

The full supply contracts currently available in the natural gas branch usually include a clause that ties the price to the oil index, together with minimum purchase quantities. These provisions are not ideal in situations that involve drastic fluctuations in procurement behaviour together with volatile gas prices.

Structured gas procurement offers industrial companies with intensive energy consumption levels an opportunity to revert to procurement alternatives that are tailor-made to their needs and to the development status of the natural gas market.

More information about our services can be found in our product-specific brochures.

Your benefit:

- First-rate, tailor-made solutions for energy-related issues, paired with reliable procurement expertise
- Demand-oriented individual support together with fair pricing
- Competent staff with all the necessary expertise for every energy question
- Optimised costs and risks through a balanced mix of products on the futures and spot market, coupled with sound procurement know-how
- Special ability for reacting to the development of your company
- Greater transparency and planning capability of your energy portfolio
